EyeCache website

1. About

EyeCache is an online store that caters specifically to NSBM students and makes it easy to connect with stylish apparel. Students can browse, buy, and keep track of college-appropriate apparel on the website.

To make shopping easy, EyeCache combines a strong database structure, a fast user interface, and safe backend procedures. It also gives administrators a wide range of tools to handle orders, inventory, and client questions.

The platform will be able to grow into mobile apps and advanced analytics in the future because of its scalable architecture, user-friendly design, and emphasis on students.

2. Analysis of the Problem

2.1 Context & Motivation

On campus, students may struggle to obtain fashionable yet reasonably priced apparel.

Traditional stores don't have a major website and are very time-consuming to visit. EyeCache handles this by:

- Offering a combined clothing inventory that is suited to students.

- Reducing the time and effort needed to purchase well-liked products
- Providing flexible payment and delivery alternatives

2.2 Objectives

- Establish a user-friendly online clothes store
- Provide a secure shopping cart and checkout procedure
- For orders and products, use role-based administrative management
- Ensure database integrity and security

3. A Synopsis of the Literature

Numerous studies back up the significance of campus-specific e-commerce platforms:

1. Student-focused apps boost engagement and purchases by 30% because they are pertinent
2. Including responsive design enhances accessibility, especially on mobile devices
3. Relational databases are used to promote data consistency for inventory and orders

EyeCache adheres to these best practices by offering NSBM students a personalised experience.

4. Both Functional and Non-Functional Requirements

4.1 Functional requirements

1. User registration, login, and profile management
2. A product catalogue with filtering options for size, colour, and category
3. Adding, deleting, and changing items in shopping carts
4. Numerous ways to pay at the register
5. Order tracking and history
6. Admin dashboard for product, order, and message management

4.2 Non-Functional Requirements

- A simple and adaptable graphical user interface
- Secure authentication and hashing of passwords
- Outstanding functionality for speedy product searches and acquisitions
- Scalable database architecture for future expansion

5. Designing a GUI and Wireframes

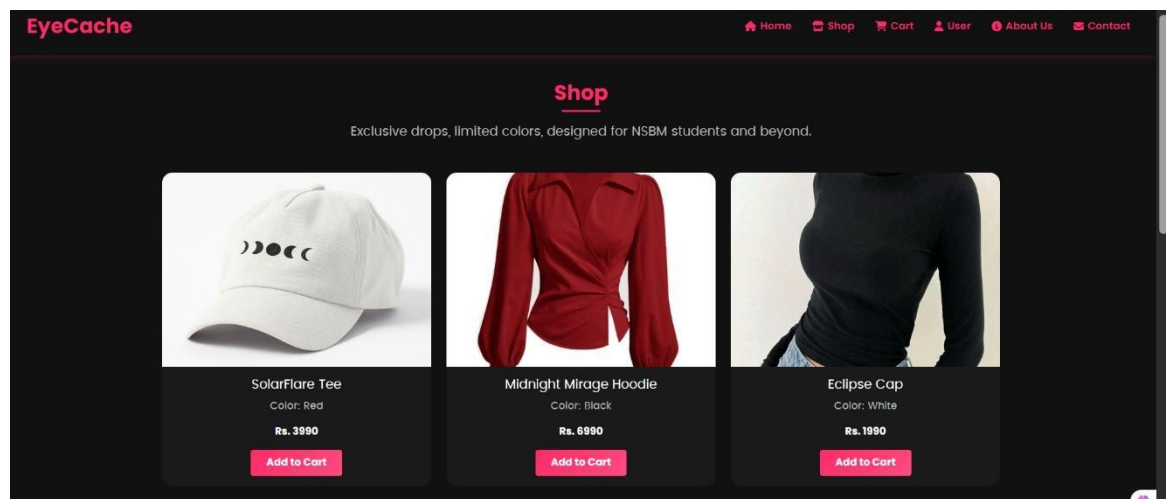

5.1 The Home Page

- Product highlights and banners
- Simple access to the user profile, shop, and cart

5.2 The Shop Page

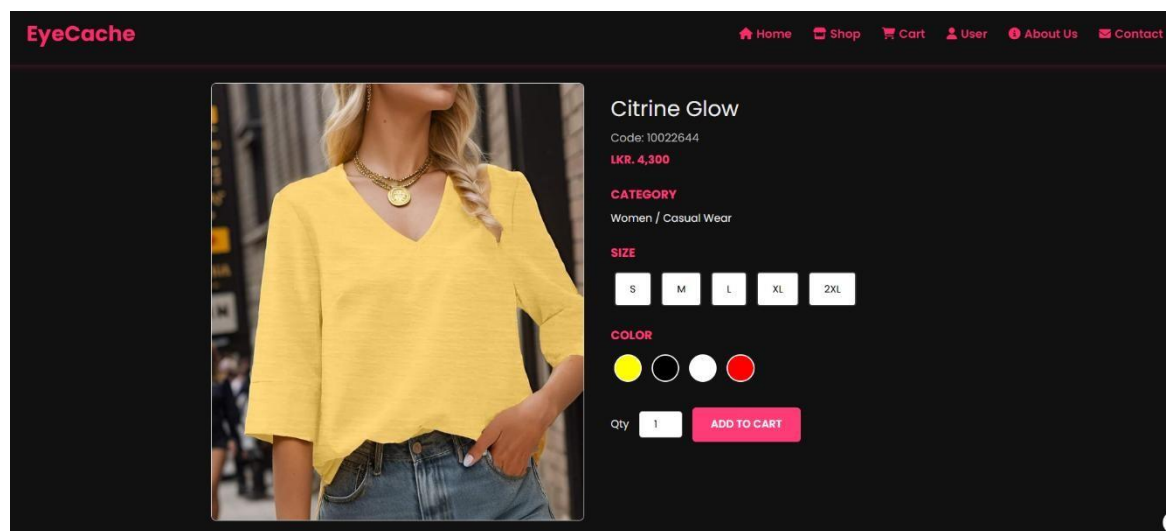

- Products that may be filtered by category, price, and colour

- Sort by popularity, price, or new arrivals

5.3 Listing of Products

- A collection of product images
- Size and colour options
- The button that says "Add to cart"

5.4 The Cart Page

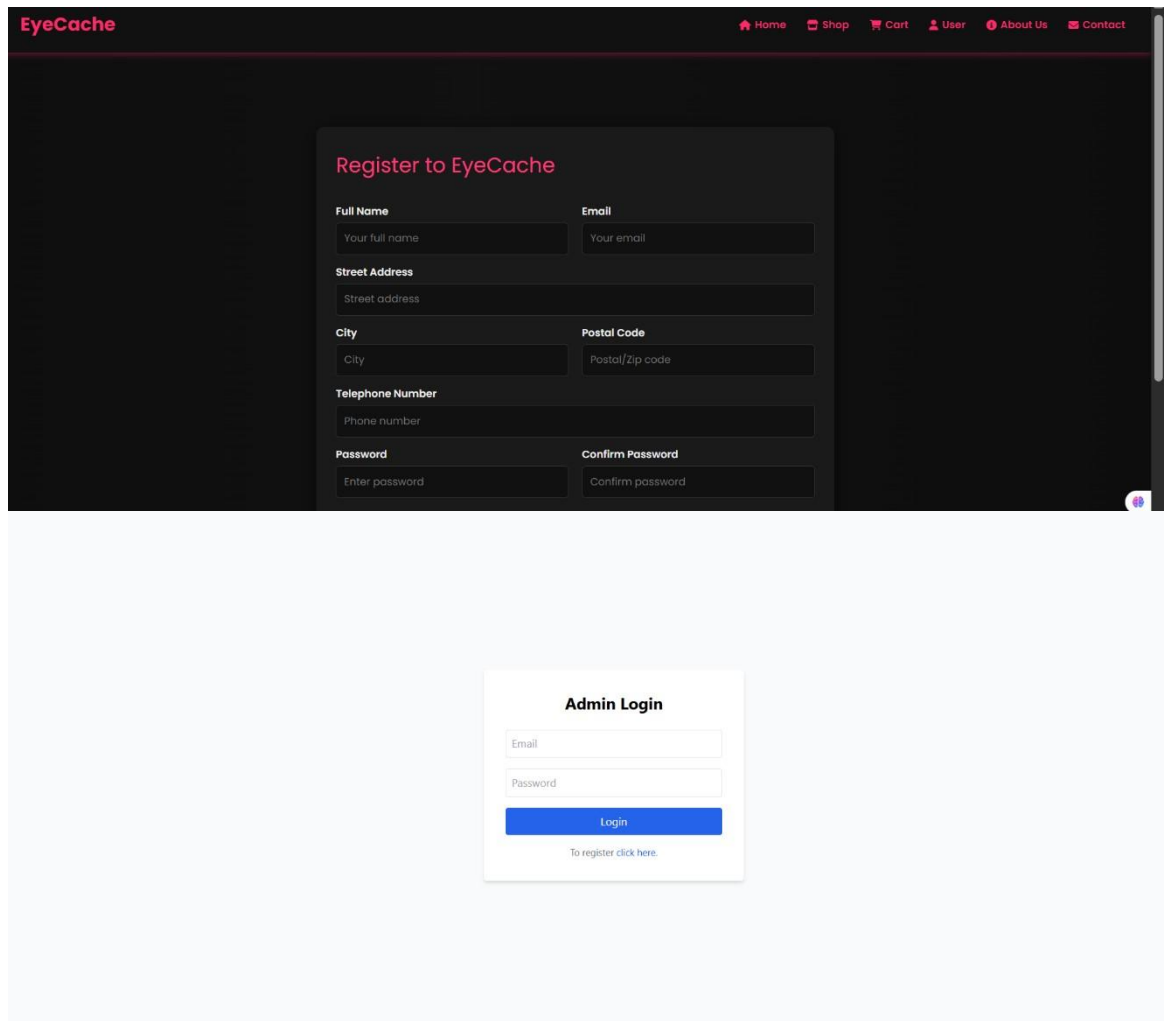

- Display the selected items
- Quantity management

- Update the total and take things out

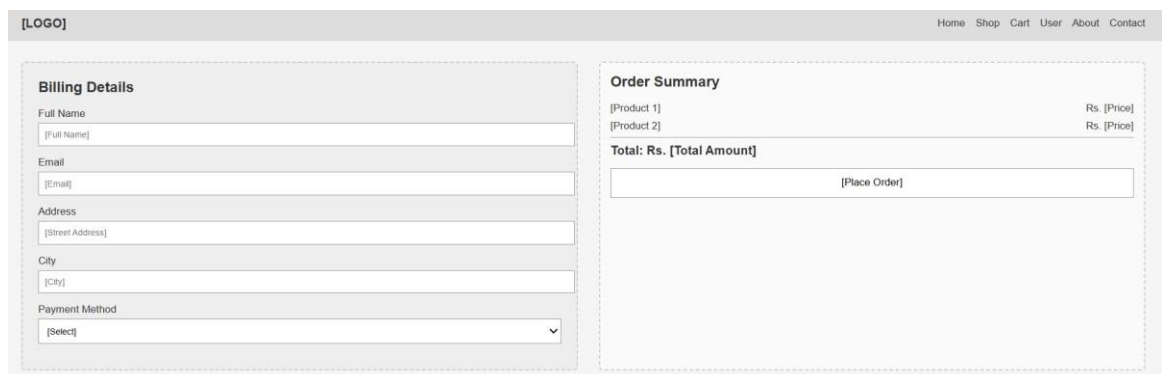

The screenshot shows the 'My Cart' checkout page for EyeCache. The page has a dark theme with red accents. At the top, there's a navigation bar with links: Home, Shop, Cart, User, About Us, and Contact. The main content area is titled 'My Cart' and features a 'Checkout' button. Below this, the 'Checkout Details' section includes input fields for Address, Name, and Telephone, each with a placeholder text. The 'Payment Method' section has two radio buttons: 'Credit / Debit Card' and 'Cash on Delivery'. At the bottom, there's a red 'PAY' button.

Extra Pages

The screenshot displays two pages from the EyeCache website. The top page is the 'Contact Us' page, which features a form with input fields for 'Your Name', 'Your Email', and 'Your Message', followed by a red 'Send Message' button. The bottom page is the 'Login' page, which includes input fields for 'Email' and 'Password', a red 'Login' button, and a link for new users to 'Register here'. Both pages have a dark theme with red accents and a navigation bar at the top.

6.Admin Dashboard

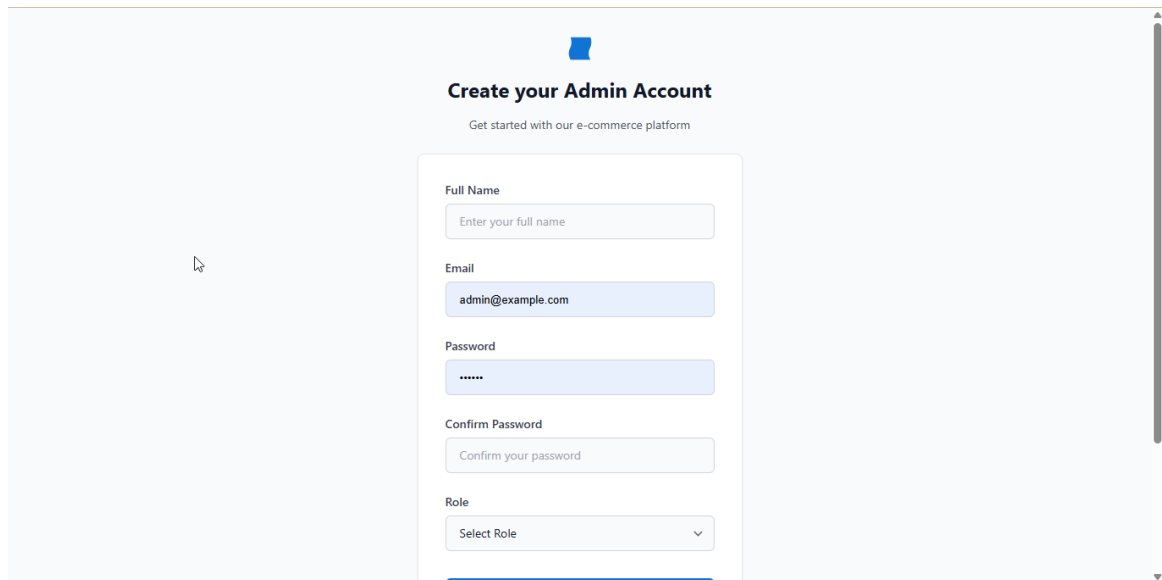

The admin dashboard is optimized for ease of use and simplicity so that administrators can use the e-commerce functionality seamlessly.

6.1. Home Dashboard: The home page provides a high-level overview with critical metrics. It is a centralized source for quick glance overview of the performance of the site.

6.2. Authentication Screens: Secure Login page and Register page for new employee accounts. The Submitted page provides a confirmation message for new account establishment.

The screenshot shows a web form titled "Create your Admin Account" with a subtext "Get started with our e-commerce platform". The form is centered on a light gray background. It contains five input fields: "Full Name" (placeholder: "Enter your full name"), "Email" (placeholder: "admin@example.com"), "Password" (placeholder: "*****"), "Confirm Password" (placeholder: "Confirm your password"), and "Role" (a dropdown menu with "Select Role" and a downward arrow). A blue horizontal bar is at the bottom of the form container.

7. Database Architecture and Details

7.1 Table Overview

- Users: administrators, staff members, and student accounts
- Products: details on the products, including category, price, colour, and pictures
- Categories: arrange things based on their kind
- Cart: things in the makeshift cart before checking out
- Orders: monitor the status of completed orders
- Customers: store user profiles

- Messages: user enquiries

Orders and items are managed by administrators and employees.

7.2. Database Tables

Products Table

id	name	color	price	image
1	SolarFlare Tee	Red	3990.00	assets/Black-Moon-Dad-Cap.jpeg
2	Midnight Mirage Hoodie	Black	6990.00	assets/download (19).jpeg

8. Processes and Use Cases

8.1 Student Workflow

1. Register or sign in
2. Examine the products and sort them by category or colour
3. Add to cart → Modify the quantity
4. Order confirmation following payment and checkout
5. Track the progress of your order

8.2 Administration Workflow

1. Log in as the administrator
2. Add, change, or eliminate product categories
3. Review and modify orders
4. Manage users and messages

9. Technical Stack

- Frontend design: HTML/CSS/JS and interaction
- PHP backend: server-side processing
- MySQL Store: users, orders, products, and communications
- Local hosting for XAMPP development and testing

Layer	Technology	Purpose
Frontend	HTML/CSS/JS	Layout, styling, and client-side interactivity. Tailwind CSS is used for rapid UI development and responsiveness.
Backend	PHP	Server-side processing and direct database interaction. The backend is responsible for all business logic, data validation, and authentication.
Database	MySQL	Stores users, products, orders, and messages. Uses a relational schema with foreign keys and constraints to ensure data integrity.

Layer	Technology	Purpose
Hosting	XAMPP	Used for local development and testing.

10. Security & Data Management

The platform is designed with security as the top most priority, particularly with the direct database connection model.

- **Prepared Statements:** Prepared statements are employed by all SQL queries to prevent SQL injection attacks. This is a security feature that is crucial in removing SQL commands from user input data.
- **Password Hashing:** User passwords for all user accounts are hashed using bcrypt prior to storage in the database.
- **Session-based Authentication:** Secure server sessions are used to maintain the authenticated state of logged-in admins and users.
- **Role-based Admin Access:** All admin capabilities are access-controlled based on the user's role to ensure authorization.
- **Input Sanitization:** All user input data is sanitized to execute kill any malicious code before it is processed by the backend, stopping Cross-Site Scripting (XSS) attacks.

11. Future Enhancements

1. A mobile application for iOS and Android
2. Payment gateway integration (e-wallets, cards)
3. Loyalty programs for schoolchildren

4. AI-driven product suggestions
5. Campus delivery integration
